

# Git & Github

## Assignment Task

---

Push all your existing projects in separate Github repositories using git commands.

- CreditWise Loan System
- SmartCart Segmentation System

### Important Note

1. Don't include the dataset in the repository. There are 2 ways to do that:
  - Create a new folder without the dataset & push that onto Github.
  - Include the dataset in a special file called `.gitignore` [\[Read more here\]](#)
2. Add a README describing the project.

Also push all your future projects onto Github.
